

3-7-3 Geometry Vocabulary Puzzle

Across

- 1 Units angles are measured in
- 3 A location in space; has no dimension
- 4 Angles that are formed when two lines intersect
- 8 Angles that have a measure equal to 90 degrees
- 9 Angles on opposite sides of a transversal
- 11 angles formed by the transversal and parallel lines on the inside of the parallel lines

- 12 Angle greater than 90 degrees
- 14 Angle measuring less than 90 degrees
- 16 Two angles that add up to 90 degrees
- 17 Extending endlessly in two directions in space. Takes two points to Define
- 19 A tool used to measure angles
- 21 A line that intersects two parallel lines

- 22 Two lines in the same plane that never meet
 - 23 Angles on the outside of parallel lines
- Down**
- 2 When the sum of the measures of two angles is 180 degrees, the angles are_____.
 - 5 Equal angles located in the same position compared to the transversal
 - 6 When two lines cross

- 7 Part of a line between two points
- 10 two rays starting at a common point
- 13 The study of flat surfaces
- 15 two lines that intersect form 90 degree angles
- 18 The study of size, shape, positions, of objects in space
- 20 A part of a line that starts at one point and extends endlessly in the other direction
